
EMAIL: jason@richmond.is ~ TEXT: 574.855.6954 ~ SITE: jason.richmond.is ~ DATE: 2023.05.18

* Software Engineer with a Master's in Computer Science familiar with a diverse array of languages and platforms seeking opportunity to build on seven years experience crafting applications in startup and academic settings.

DEVELOPMENT SKILLS

PROGRAMMING PARADIGMS:
- Object-oriented Programming
- Procedural Programming
- Functional Programming

LANGUAGES:
- Javascript
- Typescript
- HTML/CSS
- Python
- Mojo
- Swift
- Supercollider
- Counternote
- CSound
- C/C++
- C#
- Java
- SQL
- Assembly

METHODOLOGIES:
- CI/CD
- TDD
- Agile
- Scrum
- Kanban
- Gang of Four Design Patterns
- SOLID

TOOLS:
- Node.js
- React.js
- Vue.js
- Storybook.js
- p5.js
- Okta
- GraphQL
- MongoDB
- PostgreSQL
- Git
- Docker
- Mocha
- Hadoop
- Apache Pig
- Exasol
- Alluxio
- Jira

DOMAINS:
- UI/UX Design
- Full-stack Development
- Microservices
- REST
- Machine Learning
- Neural Networks
- AI

PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER — 2021 ~ 2023
Aunalytics

* Maintained the composite of microservices and REST API comprising our data solutions platform written in Node.js using MongoDB, GraphQL, Hadoop, and Apache Pig, to name a few.
* Became subject matter expert in Formations, our in-house data portability framework.
* Contributed to initiatives to improve the robustness and fault-tolerance of our data pipeline.
* Committed features that sped up our data delivery by an order of magnitude helping us achieve our on-time delivery goal over a quarter after seldom doing so over a week.
* Took the reins on implementing two-phase procedure of data manipulation so that only valid data would be written to the destination.
* Investigated and coded a dynamic solution to a logging failure impacting our ability to audit our deliverables.
* Raised the alarm to terminate a maintenance initiative that introduced widespread and subtle bugs in our soon-to-be legacy backend.
* Pushed for and piloted new team structure to better communicate and increase collaboration.
* Fixed features in the backend-of-the-frontend of our Vue.js webapp using Storybook.js.
* Engaged in designing our next generation platform written in Typescript using React.js.

LEAD INSTRUCTOR — 2018 ~ 2020
South Bend Code School

* Crafted interactive learning path spanning eleven lessons of around 25k words in p5.js, giving students an introduction to class-based object-oriented programming.
* Laid a concrete foundation for primary and secondary school students to build out abstract programming concepts using Scratch, Web Dev, Unity, Javascript, and Python.
* Entrusted with running the Elkhart branch and being liaison to local schools keeping the relevant stakeholders happy and extending Code School reach.

LEARNING FACILITATOR ~ Computer Science — 2016 ~ 2019
Academic Center For Excellence

* Equipped dozens of graduates and undergraduates of all levels having trouble grokking the theory and practice of Computer Science with the knowledge and skills to succeed.
* Debugged hundreds of student-written programs, usually on a tight deadline before submission without reference to a working answer.
* Collaborated with professors to help compress the complex world of code into the tangible everyday for entry-level students.

ACADEMIC EXPERIENCE

MASTER OF SCIENCE ~ Computer Science — 2021
Indiana University South Bend — GPA: 3.7

* Studied a wide spectrum in the discipline, from artificial intelligence to algorithm analysis, networking to neural networks, graphics to games, even writing the opcodes for a simulated CPU to run a puck-like robot with enough AI to navigate a maze.

~ * ~

```python
# GENERATE TEXT RESUME FROM DATA ~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~#
